

FILTERED WATER. TASTE THE DIFFERENCE THROUGHOUT YOUR HOME.

WHOLE HOUSE FILTER SYSTEM

Ideally, you want your water to be clean, pure, and tasteless. Yet, often times it can carry with it contaminants and other chemicals that cause foul odors and leave undesirable tastes behind. For whole-house water filtering that leaves your water tasting better, look no further than the Whole House Filter System—a superior system designed to effectively reduce or remove chlorine, chlorine byproducts, dissolved organic contaminants (including synthetic organic chemicals), metallic tastes, foul odors and other troublesome contaminants that affect water quality.

WHOLE HOUSE FILTER SYSTEM

FILTER OUT THE UNWANTED.

It starts with the Whole House Filter System.

Reduce chlorine for more enjoyable water.

With its fully-automatic, backwashing carbon filtration system, the Whole House Filter System reduces the excess chlorine left behind after disinfection. When you remove unnecessary chlorine in your home's water supply, you eliminate the unpleasant smells, tastes and skin irritation often associated with chlorine.

Taste and smell left behind.

The Whole House Filter System is designed to provide tasteless and odorless water from every tap in the house. The carbon filter removes chlorine and other contaminants that can interfere with water quality to ensure clean, fresh-tasting water flowing through your home.

User-friendly.

Virtually maintenance-free, the Whole House Filter System features an electronic control valve and automated programming for a "set it and forget it" solution.

Efficient carbon filter.

The automatic backwash feature removes accumulated contaminants and self-activates to backwash the filtration media, which means the carbon operates at maximum efficiency resulting in a longer carbon filter life span.

SYSTEM FEATURES

Built to Last

Manufactured with durable, commercial-grade, corrosion-resistant components, the Whole House Filter System includes a strong product warranty (5 years on valve/10 years on tank).

Certified Components

The components are third-party certified to NSF/ANSI Standard 61 ensuring the product complies with strict manufacturing standards.

Backwash Control Valve

A fully automated electronic control backwashing valve with a solid-state microprocessor designed and programmed to be very efficient in water usage. The control valve has low voltage (12 VAC) operation for safety and low energy requirements which means minimal annual electricity expense. The valve has multiple choices for plumbing connections of 3/4", 1" and 1 1/4".

SYSTEM SPECS

MODEL	MAX FLOW RATE (GPM)	BACKWASH RATE	TANK SIZE
WHFS10	4.7	5.5	10 X 54
WHFS12	6.8	7.9	12 X 52
WHFS13	8.1	9.2	13 X 54

HOW IT WORKS

1. Untreated water flows through the activated carbon bed.
2. As water passes through the activated carbon bed, it attracts and captures contaminants within its pore structure - removing or reducing a wide range of taste and odor causing contaminants as well as other unhealthy chemicals.
3. Clean-tasting water enters your home - providing healthier, cleaner water to you and your family.
4. Whole House Filter System periodically backwashes the activated carbon to keep the bed clean and expose more of the carbon pores, allowing for efficient carbon operation and a longer lifespan.

OPERATING PARAMETERS

pH	5.5 - 9.5
TEMPERATURE	MIN. 40 F - MAX. 110 F
OTHER CONSIDERATIONS	Water should be free from oil and suspended matter Water Should be free from iron and turbidity

* Media will need to be replaced periodically as it exhausts
